DIABETES AWARENESS, CARE AND MANAGEMENT

Diabetes is a chronic disease that affects how your body turns sugar (or glucose) into energy. When you eat, food is broken down into sugar then released into your bloodstream. Your pancreas converts the blood sugar into energy through a hormone called insulin. With diabetes, your body is either unable to make enough insulin or unable to use the insulin it produces.

Diabetes management includes lifestyle changes, daily routines and devices and equipment to monitor blood glucose levels.

Enclosed you will find information related to diabetes awareness, management and care.

If you have any questions please contact Member Services and ask to speak to a Care Manager or Wellness Coach. Member Services can be reached at 1-866-237-3210.

(TTY/TDD users should call 1-800-662-1220). Hours are 7 days a week from 8:00 am to 8:00 pm. Note: From April 1 to September 30, we may use alternative technologies on weekends and Federal holidays.

Complications, Risks and Prevention

“People with diabetes are 2 to 4 times likely to develop heart disease or have a stroke”.

HEART DISEASE/STROKE

The risk of heart disease/stroke is highest in people who:	Prevention plan should include:
Have a family history	Visits with Cardiologist
Have high cholesterol	Lowering blood pressure
Have high blood pressure	Lowering cholesterol

Did You Know?

30.3 million US adults have diabetes, and 1 in 4 are unaware they have it. Diabetes can lead to complications if not treated.

This may include:

- Heart disease
- Stroke
- Kidney disease
- Blindness
- Amputation of feet or legs

LIVE AND AGE HEALTHY AND HAPPY IN NEW YORK

“About 10% to 21% of people with diabetes develop kidney disease”.

KIDNEY DISEASE

The risk of kidney disease is highest in people who:	Prevention plan should include:
Are African American, Mexican, or Native American	Urine test for protein (microalbumin)
Have poor glucose control	Blood glucose control
Have high blood pressure	Lowering blood pressure
	Visit with Nephrologist

“Up to 21% of people with diabetes develop eye-related complications that may lead to blindness”.

BLINDNESS

The risk of blindness is highest in people who:	Prevention plan should include:
Have poor glucose control	An annual dilated eye exam by an eye doctor
Have high blood pressure	Blood glucose control
	Lowering blood pressure

WHAT CAN YOU DO TO PREVENT THE COMPLICATIONS OF DIABETES?

Daily Checklist:

- Monitor blood sugars
- Maintain healthy diet
- Exercise
- Take medications as prescribed
- Don't smoke or chew tobacco
- Maintain good oral hygiene
- Examine feet daily
- Count carbohydrates
- Report signs of infection to your doctor right away

“About 60% of people with diabetes in the United States have had a lower-limb amputation; 85% of those people had a foot ulcer before the amputation”.

FOOT ULCERS / AMPUTATION

The risk of foot ulcers is highest in people who:	Prevention plan should include:
Had diabetes for more than 10 years	Annual foot exam
Are male	Visit with Podiatrist
Have poor glucose control	Daily foot care and use of proper footwear
Have complications of the heart, eye, or kidney	Blood glucose (A1C) control
	Smoking cessation or prevention

Having a foot care program can reduce the risks of amputation by 44% to 85%.

REDUCE YOUR RISK OF COMPLICATIONS

The key to lowering the risk of complications is through the **ABCs of Diabetes**, A1C, blood pressure, and cholesterol.

A1C test. This test measures your average blood glucose levels (sugars) over a 3-month span. Your doctor should test your A1C at least twice a year. If your A1C levels are 8% or more, your A1C should be tested every 3 months.

Goal: A1C result of 7% or less

Blood pressure. This measures how hard your heart works to keep your blood flowing. Your doctor should check your blood pressure at every visit.

Goal: Maintain blood pressure below 130/80

Cholesterol. This measures the good (HDL) and bad (LDL) fat found in your blood. The goal is to keep LDL below 100 and HDL above 40 (more than 40 for men and more than 50 for women). Your doctor should check your cholesterol levels at least once a year.

**Goal: LDL below 100
HDL above 40 (for men)
HDL above 50 (for women)**

ABCs

SCREENING / TEST CHECKLIST

Results:

Eat a healthy diet and maintain a healthy weight.

- Eat more vegetables and fruits and less candy and sweets.
- Drink more water and less sugary drinks.
- Cook more meals at home.

Exercise for at least 30 minutes a day.

- You can break up the 30 minutes of exercise during the day.
- Engage in aerobics or strength training activities (for example walking or gardening).

See Your Doctors Regularly.

- Check your A1C, blood pressure and cholesterol.
- Test your urine for signs of kidney disease.
- Check your foot for tenderness and/or sores.
- Check your eyes once a year.
- Address any questions or concerns you may have.

DIABETES MYTH BUSTERS

✗ MYTHS

FACTS ✓

Myth #1: People with diabetes can't eat sugar.

Fact: People with diabetes can eat sugar in moderation. The amount of sugar in a diet plan varies by person and the medications taken.

Myth #2: Obesity causes diabetes.

Fact: The risk of diabetes may be higher with excessive weight, but not all overweight people have diabetes. There are other factors such as genes that can cause diabetes.

Myth #3: It's not safe for people with diabetes to exercise.

Fact: Diabetes does not cause physical limitations. To maintain healthy blood sugar levels, physical activity should be balanced with medicine and carbohydrate intake.
